

Maciej Woźniak

Work history

PHP Developer Pergamin 06/2025 - now As a PHP Developer at Pergamin, I contribute to the development and enhancement of an innovative document management automation platform designed primarily for HR departments. The company has created a comprehensive product that digitizes and streamlines document workflows, enabling organizations to manage all their documentation electronically. The platform supports electronic signatures, automated document processing, and seamless integration with HR systems, eliminating the need for paper-based processes. My primary responsibilities include implementing new features, optimizing existing functionalities, and ensuring the platform's scalability to meet growing client demands. Main technologies: PHP Laravel PostgreSQL Kubernetes AWS Docker Microservices
Senior Software Engineer AUTO1 Group 02/2024 - 06/2025 As a Senior Software Engineer in the Logistics Division of a multinational corporation, I contributed to the development and optimization of multiple microservices that manage vehicle transportation and delivery scheduling across Europe. Platform ensures seamless coordination of vehicle movements, whether for branch transfers or home deliveries. My primary responsibilities included designing and implementing new features, enhancing existing functionalities, and ensuring the scalability and performance of our services. Given the complexity of our ecosystem—comprising hundreds of microservices and large-scale databases — I focused on building high-performance, efficient, and maintainable solutions. My work directly impacted the efficiency of logistics operations, enabling smooth and reliable vehicle transport across multiple markets. Main technologies: PHP Symfony PostgreSQL Codeception AWS Jenkins Terraform Docker Microservices Kibana
PHP Developer Daftcode 05/2022 - 02/2024 My main responsibilities involved the development and maintenance of applications and related services. I actively participated in the application architecture design process, creation of new features, and refactoring of existing code. The applications I worked on originally used Laravel, but have gradually transitioned to Symfony during my tenure. Applications followed Domain-Driven Design (DDD) architecture and communicate with mobile applications and web platforms through REST API. The code was covered by unit tests and end-to-end tests. One of the primary challenges I encountered was integrating with payment systems and handling the collection and modeling of statistical data. Main technologies: PHP Symfony Laravel MySQL ClickHouse ElasticSearch PHPUnit Grafana Docker Docker Swarm
PHP Developer Grupa eSprzedaż / Netgraf 02/2021 - 03/2022 My primary responsibilities included the development and maintenance of e-commerce applications. Some were built using the Kohana framework, while others were written in pure PHP. These applications followed the MVC architecture and utilized a proprietary CMS, enabling the management of multiple stores from a single panel and integration with wholesalers, couriers, payments, and marketplaces such as Allegro, eBay, and Amazon. A key challenge I faced was customizing applications to meet client needs while maintaining compatibility with essential CMS features. Main technologies: PHP Kohana MySQL Git JIRA
Programming Teacher Giganci Programowania sp. z o. o. 10/2019 - 06/2021 I was responsible for conducting programming courses for children and teenagers aged 7-18. The courses I led covered the basics of desktop application programming using C# and fundamental web application programming using the WAMP stack, incorporating basic front-end technologies. Main technologies: C# PHP MySQL HTML CSS JavaScript
Junior Web Developer Kadeor sp. z o. o. 11/2018 - 05/2021 My main responsibilities included creating online stores using CMS platforms like WordPress and PrestaShop. I also contributed to the development of an internal CRM for managing clients, contractors, and projects. The CRM was built using the Laravel framework and followed the MVC architecture. In most projects, I worked independently, handling infrastructure selection and configuration, back-end work related to CMS customization, and front-end work involving template customization. Main technologies: PHP MySQL HTML CSS JavaScript jQuery Bootstrap Laravel Wordpress PrestaShop
Game Tester Testronic sp. z o. o. 12/2017 - 04/2018 I worked on testing computer games on PC, PS4, Android, and iOS platforms. My tasks included identifying elements in test versions of games that deviated from documentation or were inconsistent with other game elements. I reported these findings using tools such as JIRA and TestRail. Main technologies: JIRA TestRail Confluence

Education

Warsaw University of Technology (Politechnika Warszawska) Information Technology / Engineer	2017 - 2021

Tech skills

● Back-end technologies ◆ PHP ■ Symfony ■ Laravel ◆ Go ◆ C#	
● Databases ◆ MySQL ◆ PostgreSQL ◆ ClickHouse ◆ ElasticSearch ◆ Redis	
● Front-end technologies ◆ JavaScript ■ jQuery ■ React ◆ CSS ■ Bootstrap	
● Approaches and concepts ◆ REST API ◆ OOP ◆ Microservices ◆ TDD ◆ DDD ◆ Design patterns ◆ SOLID ◆ CI/CD	
● Testing tools ◆ PHPUnit ◆ Codeception ◆ Behat	
● Cloud & Infrastructure ◆ Docker ◆ AWS ◆ Terraform ◆ Docker Swarm	
● CI/CD & Automation ◆ Github Actions ◆ Gitlab CI/CD ◆ Jenkins MQ	
● Message queues ◆ Rabbit MQ	
● Monitoring and Analysis Systems ◆ Grafana ◆ Kibana	
● Version control ◆ Git
